About me

I am a full-stack developer focused on building scalable, high-performance applications. Passionate about optimizing system efficiency and creating seamless user experiences, I design robust architectures and develop innovative solutions that drive business growth.

Technical And Soft Skills

Languages: C, Java, SQL, No SQL, JavaScript, TypeScript, HTML, CSS, Python, Go

Frameworks: Next.js, Express.js

Platforms: AWS, Linux, GitHub

Machine Learning and Data Science: Knowledge of ML models, supervised and unsupervised learning, deep learning frameworks.

Libraries: React, Tailwind CSS, Shadcn UI, Prisma, Socket.io

Tools: Git, VS Code, Figma, Balsamiq, Packet Tracer, Wireshark

Soft Skills: Problem-Solving, Communication, Adaptability, Quick Learning, Critical Thinking, Innovation.

Experience

Acqueon, Software Development Engineer (Intern)

Bengaluru
2025 April – Sept

- Worked with technologies like React.js, Tailwind CSS, JavaScript/TypeScript, , and REST APIs.
- Collaborated with US-based clients and cross-functional teams, including backend developers and UX designers, to integrate RESTful APIs and deliver seamless user experiences.
- Participated in code reviews and agile sprint planning to ensure continuous integration and timely delivery

My Projects

VISTA Ai-Powerd Video Communication Platform

2025 Feb-June

- A AI-driven video streaming and recording platform that makes video creation and collaboration effortless. Unlike other platforms, it simplifies the entire process — from recording to transcription — with AI-powered automation, ensuring a smooth and intuitive user experience. The platform delivers fast performance, reliable scalability, and seamless sharing, making it easy for users to create, manage, and engage with video content effortlessly.

Responsibility

- Developed and maintained an AI-driven video streaming and recording platform, ensuring high performance and scalability.

AI-Powerd Web Scraping Platform

2024 Nov-Dec

- Built an automated platform to scrape raw data from diverse web sources, then used an LLM to clean, summarize, and structure content for market research, competitive analysis, and content aggregation.
- Designed with both technical and non-technical users in mind, simplifying data collection and enhancing insights.

Restaurant Scraper

2024 Nov

- Developed a scraper that searches top restaurants via Google, and extracts name, rating, location, reviews into CSV. Enables quick, automated data analysis — ideal for food bloggers, market researchers, and business owners.

Education

MCA PES University, Master of Computer Application

2023 – 2025

- The MCA program at PES University is a two-year postgraduate course designed for individuals aiming to advance their careers in computer applications. The curriculum encompasses foundational and core subjects, electives, and project work.

BCA Presidency University, Bachelors of Computer Application

2019 – 2022

- The BCA program at Presidency University is structured to meet the evolving demands of the IT industries. Covers essential topics such as computer algorithms, programming, database management systems, computer networks, internet technologies, cloud computing, and mobile applications.
